

Topic	Comment
Access	Wind River Trail - is it a traditional access route? There are laws associated with existing access routes
Access	existing access route needs definition (access chapter) needs to be used on regular basis and Wind River trail is only used occasionally
Access	Wind River trail - under highways act
Access	Winter road - uses/seasonal uses
Access	Hart River Road - area development act - has some official designation --> compare to Wind River Trail
Access	Snake River [Crest Iron] --> access from north after oil/gas? With Slurry line?
Access	--> Old Cat trail - 1959 (Wind Trail) --> can it be restricted? Or redesignated?
Access	Hart River Road designation as road not "official"/technical reasons? -Dempster access -Area development Act provisions for ATV access as "road"
Climate change	Think broadly about Climate Change --> eg climate change --> thaw slumping. "climate change" impact prevention in sensitive areas (general across the Peel)
Climate change	need to monitor the effects of climate change on land -> relates to implementation funding for recommendations -> fish and wildlife - caribou displacement and predator (what new information?) --> trigger for a plan review if climate change impacts found
Climate change	Climate change will affect caribou patterns --> grizzly bear patterns - changes should trigger review of the plan --> triggered by change in thresholds --> look at PWPC and BP heritage document --> data gaps --> plan recommends how to address / Tradi
Climate Change/ Permafrost	Whoever gets there first seems to set the plan --> eg. YG road crew at Chapman Lakes - exposed black mud --> permafrost melted - impact of global warming? Eg. Dempster corridor development/eg. Road development - melting impacts - erosion/permafrost
Climate Change/ Permafrost	Need a Permafrost Management Direction for whole area
Community Consultation	FN control of land use permits - when and who -need a way of capturing FN issues and interests
Community Consultation	community consult - ask where they want consultation
Community Consultation	record oral stories; proper interpretation of oral stories, impact of rights, ties to the land, rights of future generation, need to research this
Community consultation	community direction to determine if Oil/Gas is acceptable?
Community Consultation	very difficult for delegates to make proposals --> need direct community-based planning
Community consultation	Wind River Trail not hwy (designated unilaterally not consultation) -open access for winter? Snowmobile/dogsled -not heavy equipment

Topic	Comment
Community Consultation	Community planning information --> need other elders/community members to have input
Conflicts	Conflicts will increase with time --> seasonal use --> year round
Conflicts	Turner wetland has come up, commission needs to make recommendations on this area but there are oil and gas opportunities
Conflicts	Outfitters building airport/cabins at Nash Creek. FN not consulted. -summer access wind river road not compatible with FN activities - prospecting with aircraft --> not compatible with outfitting activities crown land - language around this word - who co
Conflicts	staked claims - those with lapsed claims will want to return
Conflicts	FN future uses on fee settlement lands? Conformity issue? What is compatible?
Conflicts	When planning for protected areas --> FN uses must be maintained
Conflicts	"Claim interest in Oil/Gas?" -zoning for protection -permits for exploration - N. Turner Lakes -protected/conservation areas - "Grandfather claims? On oil/gas permits? In Peel plateau (calving area) -What comes after exploration? Long term effects -h
Conservation	Conservation areas should include calving areas. Protection of sensitive systems, especially certain times of the year. Will existing permits prevent conservation?
Conservation	Chapman Lake --> important for waterfowl
Conservation	Protect Richardson Mountains; Students - education is happening on the land eg TG and German students on Snake; Oil and Gas activity wouldn't fit with tours like that
Conservation	up Trail River - moose every day, headwaters of the Snake, BP, Wind. Snake should be protected - even the whole watershed. OK with wilderness tourism
Conservation	Protect Hungry Lakes, Hart River, Wind River --> would like to do something like Tombstone Park --> Territorial Park - eg. Richardsons and Calving Hill and Turner Lakes
Conservation	Tribal Park --> similar to Territorial Park - would like to see this. FN would have control of park.
Conservation	Hart should have some special designation, possible protected area or buffer to Tombstone Park
Conservation	Hunting control/near Margaret Lake? (no Oil and Gas tenure) Knor range. Important for fish and wildlife
Economy	Niche market is already filled --> little opportunity for locals -->McPherson guys tried boat ferrying service -->no headway - need big startup dollars -->idea horseback tourism --> water already protected (existing transboundary agreement)
Economy	Outfitting - legal requirements first-aid FAC etc. field experience should be more necessary than certification through course work
GLUPC	we should look to the Gwich'in Plan Book -> once approved by Feds all projects must pass through land and water board, if not to GLUPC --> plan should be on top --> if plan not interfered with and supported by the communities it will have power. Gwich'in
Language	Crown land --> is actually non-settlement land
Language	re: language used: non-settlement land not crown land
Planning	Settlement land plans --> Peel Plan, what constitutes a pre-existing plan? FNs need to come forward with plans
Planning	Peel plan will dictate if there are no FN plans

Topic	Comment
Planning	Settlement lands: important for planning to have as much information as possible about what FNs intended purpose is for settlement lands
Planning	LUP must conform to existing plans: therefore FNs could pre-plan settlement lands and drive regional LUP
Planning	the plan is a small part of the decision making process - concerned it may not carry as much weight as people believe it will.
Planning	monitoring of landscape changes - relates to implementation funding for recommendations
Planning	-Plan implementation, -need assurance Plan will remain guiding document (not changed without commission consultation)
Planning process	10-15 years. Plan span
Planning process	There is a reason planning is in the claim. It is up to us to come up with land use planning
Planning process	let the communities make the plan and not be guided by Oil and Gas
Planning process	GTC & GLUPC want to be involved, give and receive information
Planning Process	to the PWPC - Just do your work
Planning process	who has control over claim (Gov't or FN people) - want government to government relationship
Planning Tools	thresholds can be used--> can be measured
Planning Tools	NYPC used thresholds, we should look to their plan for examples
Planning Tools	Using thresholds requires monitoring, there are implementation considerations
Planning Tools	Commission can develop its own designations -->we are not pigeon holed into a framework
Planning Tools	Apply limits and thresholds as part of recommendations
Planning Tools	buffer between different land use design eg. Around tombstone
Planning Tools	cumulative effects must be considered
Planning tools	Chpt. 10 (Special Mgt) can drive the use of those tools
Planning tools	key issue: development thresholds if exceeded could impair other uses (must be respected)
Plannint Tools	cumulative effects must be considered for the long-term
Plannning	Buffer TG lands on Peel: There are several R-blocks along the Peel that could be buffered. This may depend on the zoning around the R-blocks and the planning within the R-blocks themselves.
Question	Do oil and gas exploration leases override the plan?
Question	What commitments do mining/oil & gas companies have to FNs?
Question	National historic site designation- need follow up on definition & restrictions placed on afterwards --> what is it --> what does it mean > TG designation
Question	Follow up on what protected areas were identified in the Issue and Interests Report
Question	fish spawning --> Inuvik --> request fish form - DFO may have information
Question	Question: What have O/G folks said? Reg explained their participation in the process. O/G. plan said the plan may not work for them, we need to hear back from them.
Question	Commission role in reviewing projects? YESAB decisions on conformity - how and when will Commissions be (re)activated subject to interpretation of Ch 11 - question to Claims Branch
Question	wind river trail not yet confirmed (government to government)

Topic	Comment
Regulations	Uranium - no regulatory regime -> TG without regulatory regime --> No exploration without general management direction regime. Need policy direction for regulations on uranium prior to exploration mining "uranium exploration" lack of regulations (only ju
Regulations	oil and gas leave behind a legacy of camps etc... how is clean-up enforced by YG --e.g .bonding?
Regulations	South of Wernecke -dead salmon -mining waste -government says not responsible to clean up - but this was part of agreement
Regulations	use of Nash Creek was abused by someone and their dogteam; requires monitoring; collection of baseline data; Traditional knowledge getting elders' knowledge into the plan - this needs to happen
Traditional Culture	FN spiritual ties - More emphasis needs to be placed on spiritual value of the land. -> in Plan and Process -> from beginning, FNs are guardians of land --> in plan ->"Spiritual" links to the land - how addressed? ->general FN ethnic/beliefs (understood
Traditional Culture	Walter Alexie: Born on Trail River; Trapped in Caribou Hill, Hungry Lake, BP flats, Brown Bear Creek; Used to be by dog team - now by skidoo; Went along Richardsons
Traditional Culture	Nash Creek - NND developing more of a presence
Traditional Culture	Knor Range -whitefish, jackfish, greyling; Margaret Lake -important for fish. Pointed out areas travelled in BP and S headwaters - gravesites, campsites, around Gillespie Lake, huge flat, stone axe stumps, mouth of Goz River, used to bend canoe frames,
Traditional Culture	Cache Creek: cultural camp s-site, 6 cabins, cultural and hunting camps. -north of 10 -windy pass -sheep hunting -Percy trapline (YG trapline)
Traditional Culture	Traditional Use could be intensive year round -not just 2 week window or seasonal
Traditional Culture	Understand links between sectors, chapters, economics - research needed. FN needs to draft wording for spiritual aspects of the plan
Traditional Culture	communities are as good as any technical source, education all the time (Traditional Knowledge)
Traditional Culture	Have a "First Nations Trad. Use" sector in plan (a chapter)
UFA	Chptr 22 - 25% of permits: If the wilderness tourism industry should ever be regulated (the number of permits issued limited) the FN will receive 25% of the permits. Will the FN also be able to issue these permits?
UFA	agreements do provide for min. participation (Chpt 22) if there is limitation
Water quality	Need to be aware of issues industrial development will bring --> water quality
Water quality	protected for fish, water quality downstream --> water should not be spoiled --> water pipeline - thinking of the future --> will not include a road option. (Sam spoke to wind and snake river options)
Water quality	Sustain FN over 100-200 years -what can be done? -establish a park -but need community consultation -relationship of the water downstream -boreholes 20-30's lead to health issues?
